

# Medical Informatics: Computer Applications in Health Care and Biomedicine (Health Informatics)

The practice of modern medicine and biomedical research requires sophisticated information technologies with which to manage patient information, plan diagnostic procedures, interpret laboratory results, and carry out investigations. Medical Informatics provides both a conceptual framework and a practical inspiration for this swiftly emerging scientific discipline at the intersection of computer science, decision science, information science, cognitive science, and biomedicine. Now revised and in its second edition, this text meets the growing demand by practitioners, researchers, and students for a comprehensive introduction to key topics in the field. Authored by leaders in medical informatics and extensively tested in their courses, the chapters in this volume constitute an effective textbook for students of medical informatics and its areas of application. The book is also a useful reference work for individual readers needing to understand the role that computer can play in the provision of clinical services and the pursuit of biological questions. The volume is organized so as first to explain basic concepts and the to illustrate them with specific systems and technologies. The book has been extensively revised and updated for this second edition, and new topics include: ? Standards in Medical Informatics ? Ethics of Health Informatics: Users, Standards, and Outcomes ? Evaluation and Technology Assessment ? Public Health and Consumer uses of Health Information: Education, Research, Policy, Prevention, and Quality Assurance ? Bioinformatics Edward H. Shortliffe, M.D., Ph.D., is professor and chair of the department of Medical Informatics at Columbia University?s College of Physicians and Surgeons. A member of the Institute of Medicine and a regent to the American College of Physicians-American Society of Internal Medicine, he is also a

fellow of the American College of Medical Informatics and serves on the President's Information Technology advisory Committee. Leslie E. Perreault, M.S., is a director at the First Consulting Group in New York City. A graduate of Stanford University's training program in medical informatics, she has extensive experience as a consultant to healthcare organizations, especially regarding clinical systems and their integration to the enterprise. Gio Wiederhold, Ph.D., is professor of computer science at Stanford University, with courtesy appointments in Medicine and Electrical Engineering. He is a fellow of the American College of Medical Informatics, the IEEE, and the ACM.

PDF The world of biomedical research and health care has changed remarkably in the 25 years since the first edition of this book was published. This series is directed to healthcare professionals who are leading the transformation of health care by using information and knowledge. Launched in 1988 as *Editorial Reviews*. Review. From the book reviews: The book provides an extensive discussion of many important theoretical aspects of bioinformatics. Abstract This article is an invited review of the third edition of *Biomedical Informatics: Computer Applications in Health Care and Biomedicine*, *Biomedical Informatics: Computer Applications in Health Care and Biomedicine (Health Informatics)* [Edward H. Shortliffe, James J. Cimino] on *.BIOMEDICAL INFORMATICS: Computer Applications in Health Care and Biomedicine*. Fourth Edition. Editors. Edward H. Shortliffe. James J. Cimino. Taipei, Taiwan.
