Risk management products and derivatives have grown ever more numerous and diverse since the late 1980s. Investors need to know which ones will best serve their needs in today's dynamic bond market. This book reveals how more than three dozen experts control and preserve the value of their own fixed income portfolios--from choosing the right risk management product to monitoring and evaluating the effectiveness of hedge management strategies. Shows investors how to make the best use of swaps, options, futures, and other risk management products in the market; identify and measure a portfolio's or corporation's risk exposure; and more.
