With today's low interest rate environment, investors are investing in stocks with high dividend yields to create streams of income. This book discusses how to create an income portfolio to not only produce income but to grow dividends over time to create yields above 10% or more. To lower the risk of investing in stocks, investors need to buy stable, high quality stocks at the right price. This book discusses a stock valuation model to determine a stock's fair value which can be compared to the current trading price. This tells the investor when to buy a stock below fair value to lower investing risk and increase future returns.
