

## Intel: Mid Year Review 2016

Intel Corporation is a semiconductor chip maker. The Company is engaged in developing advanced integrated digital technology products, primarily integrated circuits, for industries, such as computing and communications. Its primary component-level products include microprocessors, chipsets, motherboards, wired and wireless connectivity. The Company offers products at various levels of integration, allowing its customers the capability to create computing and communications systems. As of December 27, 2008, the Company was mainly organized in two segments: Digital Enterprise Group (DEG) and Mobility Group (MG). In July 2008, Impinj, Inc. announced the acquisition of Intel Corporations radio frequency identification operation, a business created by the Companys new business initiatives incubator, and which developed the R1000 RFID reader chip. During the fiscal year ended December 27, 2008 (fiscal 2008), the Company completed the divestiture of its NOR flash memory business. This book provides the reader a mid year review of Intel. The analysis is based on price volume data, latest and historical financials and regulatory announcements.
