

Stop Alzheimers Now!: How to Prevent & Reverse Dementia, Parkinsons, ALS, Multiple Sclerosis & Other Neurodegenerative Disorders

More than 35 million people have dementia today. Each year 4.6 million new cases occur worldwide-one new case every 7 seconds. Alzheimers disease is the most common form of dementia. Parkinsons disease, another progressive brain disorder, affects about 4 million people worldwide. Millions more suffer with other neurodegenerative disorders. The number of people affected by these destructive diseases continues to increase every year. Dementia and other forms of neurodegeneration are not a part of the normal aging process. The brain is fully capable of functioning normally for a lifetime, regardless of how long a person lives. While aging is a risk factor for neurodegeneration, it is not the cause! Dementia and other neurodegenerative disorders are disease processes that can be prevented and successfully treated. This book outlines a program using ketone therapy and diet that is backed by decades of medical and clinical research and has proven successful in restoring mental function and improving both brain and overall health. You will learn how to prevent and even reverse symptoms associated with Alzheimers disease, Parkinsons disease, amyotrophic lateral sclerosis (ALS), multiple sclerosis (MS), Huntingtons disease, epilepsy, diabetes, stroke, and various forms of dementia. The information in this book is useful not only for those who are suffering from neurodegenerative disease but for anyone who wants to be spared from ever encountering one or more of these devastating afflictions. These diseases dont just happen overnight. They take years, often decades, to develop. In the case of Alzheimers disease, approximately 70 percent the brain cells responsible for memory are destroyed before symptoms become noticeable. You can stop Alzheimers and other neurodegenerative diseases before they take over your life.

The best time to start is now.
